RETAIL SALES ANALYSIS CASE STUDY: AURORA THREADS BOUTIQUE

Using Power BI (DAX & Power Query) for Business Insights

Gabriel Okeke | Data Analyst | March 2026

BUSINESS OVERVIEW

- Aurora Threads is a fashion retail boutique
- Specializes in clothing, accessories, footwear
- Operates across multiple stores
- Focuses on customer experience and product variety

PROBLEM STATEMENT

- Difficulty extracting insights from raw sales data
- No clear visibility into top-performing products
- Lack of understanding of customer spending patterns
- Inefficient tracking of daily sales performance

The business lacks clear, actionable insights from its sales data.

PROJECT OBJECTIVE

- Use Power BI to analyze sales performance
- Apply DAX for calculated insights
- Use Power Query for data transformation
- Identify trends in sales, customers, and products
- Identify top products & categories
- Understand customer behavior

Transform raw data into actionable business insights

DATA & TOOLS USED

Data Includes:

- Product categories & items
- Customer transactions
- Payment methods
- Daily sales

Tools Used:

- Power BI
- Power Query (M Language)
- DAX Calculations

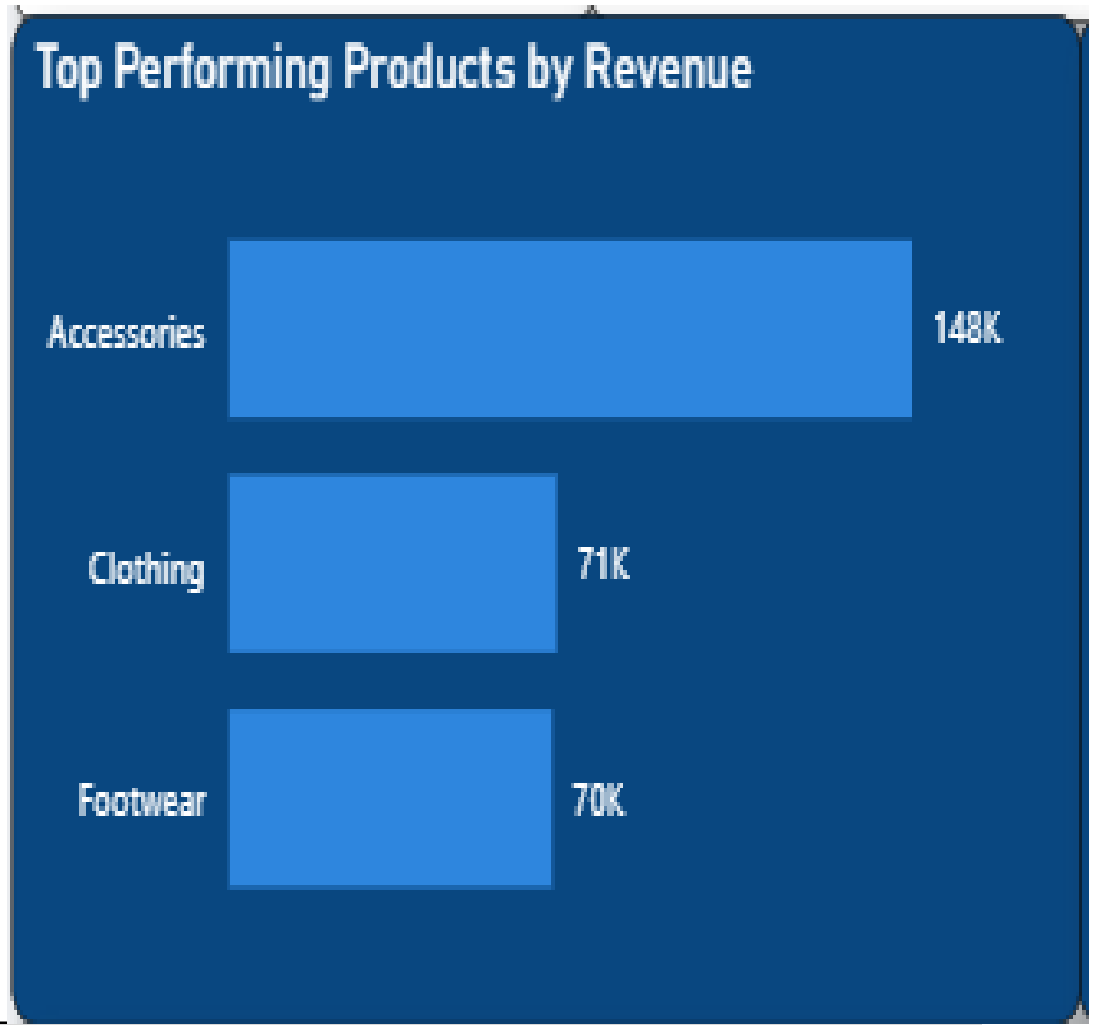
Daily Revenue Trend (Peak Sales on Day 5 & 25)

Customer ID	Revenue
CUST001	5,700.00
CUST002	3,750.00
CUST003	7,200.00
CUST004	19,440.00
Total	288,457.50

This interactive dashboard provides a comprehensive view of sales performance, customer trends, and product insights.

Which Product Category Drives Revenue?

- Accessories generate the highest revenue (148K), significantly outperforming other categories
- Clothing and Footwear contribute almost equally but at a much lower level

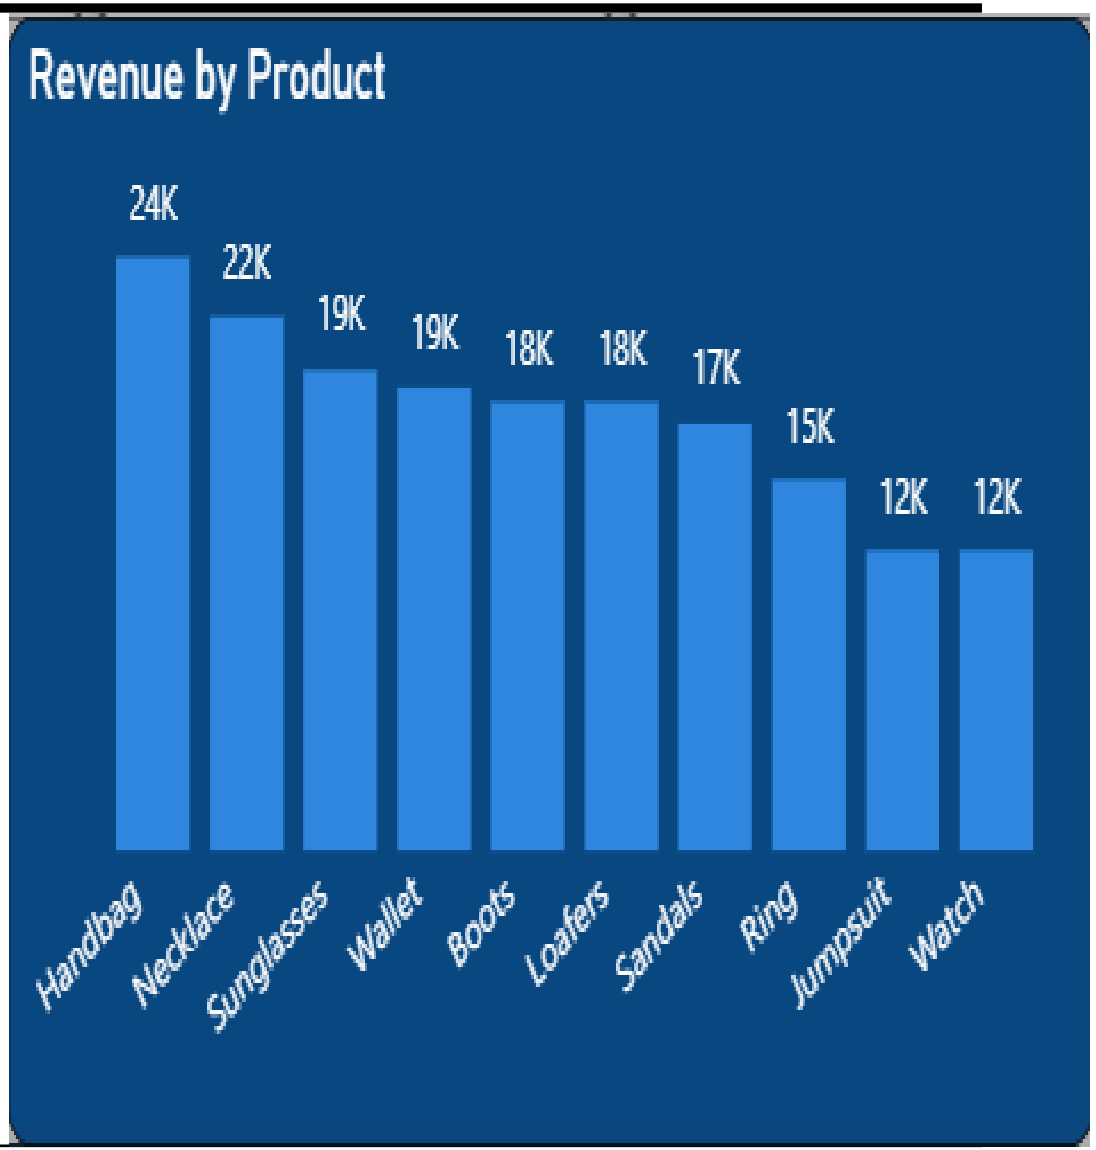


The business is heavily dependent on Accessories for revenue

Top Performing Products

- Handbags and Necklaces are the top revenue-generating products

- Lower-performing items include Watches and Jumpsuits

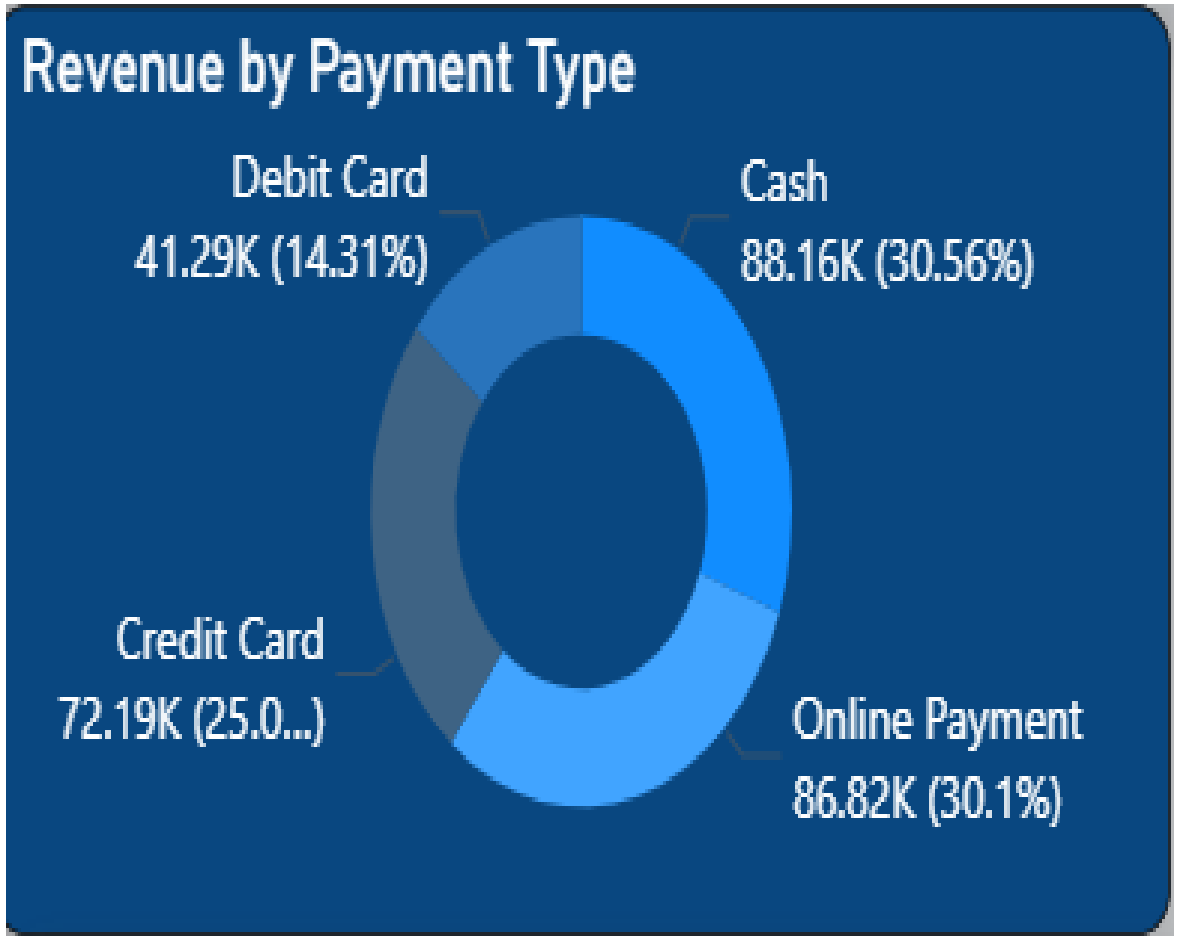


- *A few key products are driving most of the revenue*
- *Revenue concentration on specific products*

How Do Customers Pay?

- Cash and Online Payments dominate transactions

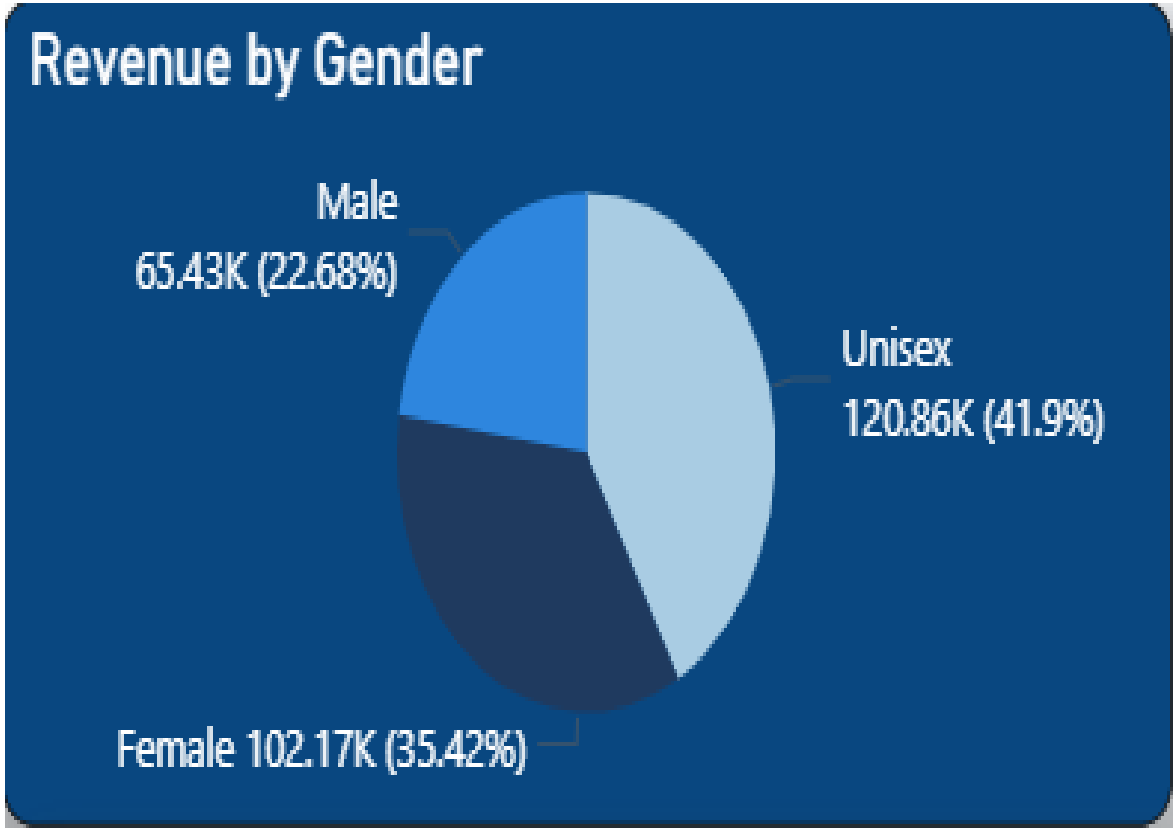
- Debit card usage is the lowest



Customers prefer convenience and flexible payment methods

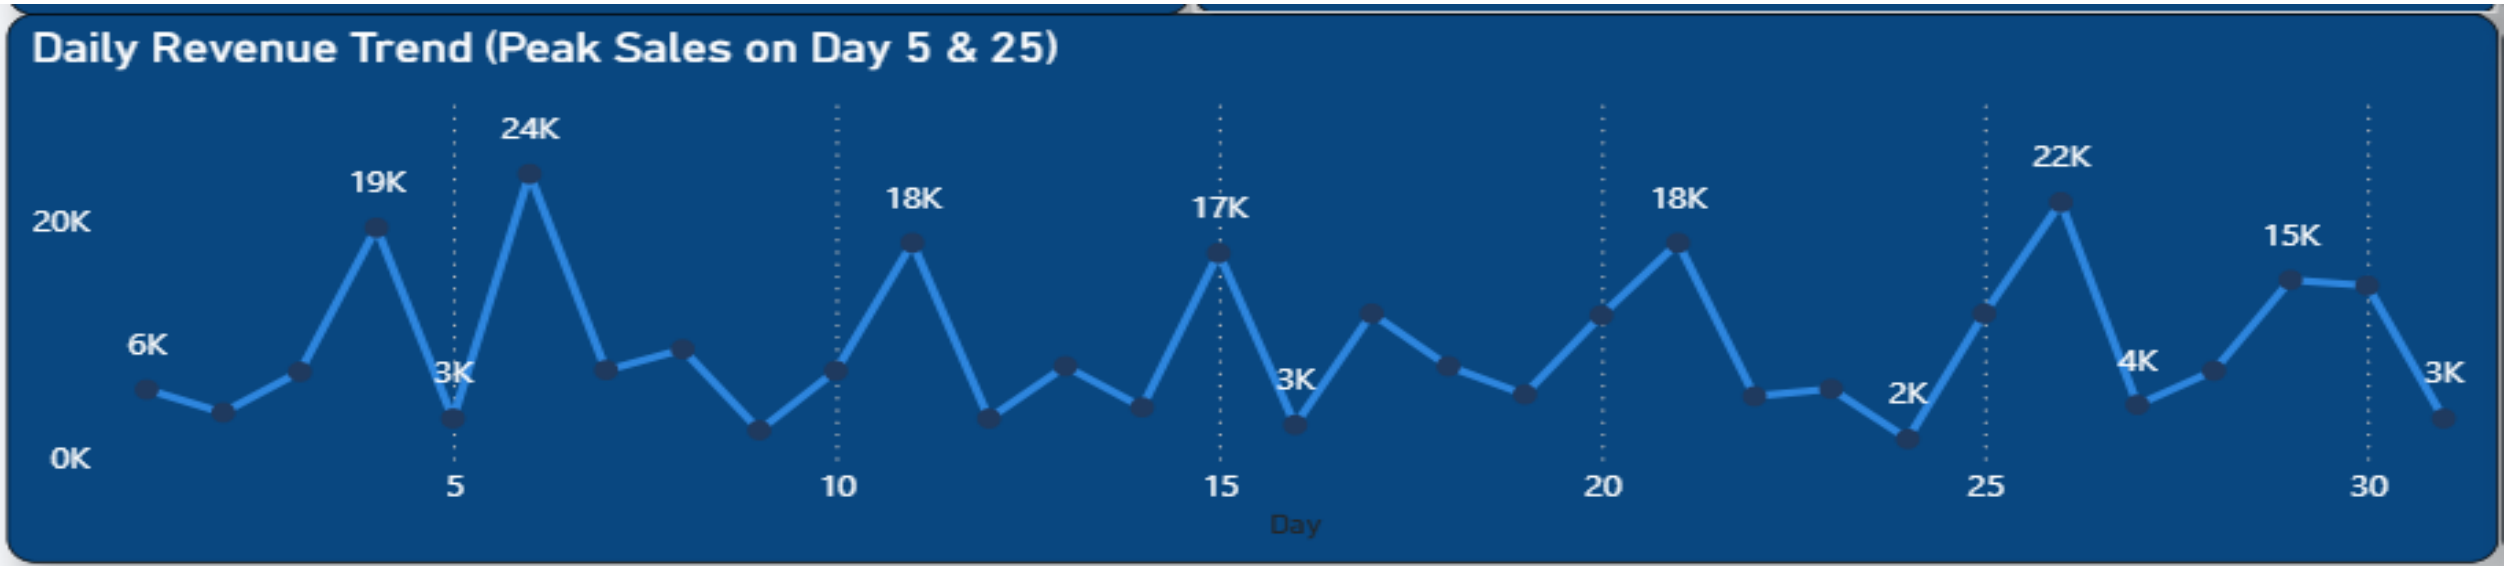
Customer Distribution by Gender

- Unisex products generate the highest revenue (~41.9%)
- Female customers contribute significantly (~35%)
- Male contribution is lower (~22%)



Products appealing to a broader audience (Unisex) perform best

When Do Sales Peak?



- Sales peak around Day 5 and Day 25
- Several fluctuations indicate inconsistent daily performance

There are specific high-demand periods that can be targeted

Who Are the High-Value Customers?

- A small number of customers contribute significantly higher revenue
- Example: Customer with ~19K revenue stands out

Customer ID	Revenue
CUST006	24,000.00
CUST026	21,600.00
CUST004	19,440.00
CUST011	18,150.00
CUST021	18,150.00
Total	**101,340.00**

Revenue is concentrated among a few high-value customers

EXECUTIVE SUMMARY

- Accessories generated highest revenue (148K)
- Peak sales occurred around Day 5 & Day 25
- Handbags & Necklaces are top-performing products
- Online & Cash payments dominate transactions
- High-value customers contribute significantly to revenue

BUSINESS RECOMMENDATIONS

- Focus marketing and inventory on high-performing categories (Accessories)
- Promote top products (Handbags, Necklaces) more aggressively
- Launch campaigns around peak sales periods (Day 5 & 25)
- Introduce loyalty programs for high-value customers
- Optimize digital and online payment systems
- Improve performance of low-selling products through discounts or repositioning

Leveraging these insights can significantly improve revenue growth and customer retention.

CONCLUSION

- The dashboard provides clear visibility into sales performance
- Key revenue drivers and customer behaviors were identified
- Data-driven insights can guide better strategic decisions
- Power BI proved effective in transforming raw data into actionable insights

THANK YOU
