Excel Capstone Project Analysis

Business Problem & Project Goals

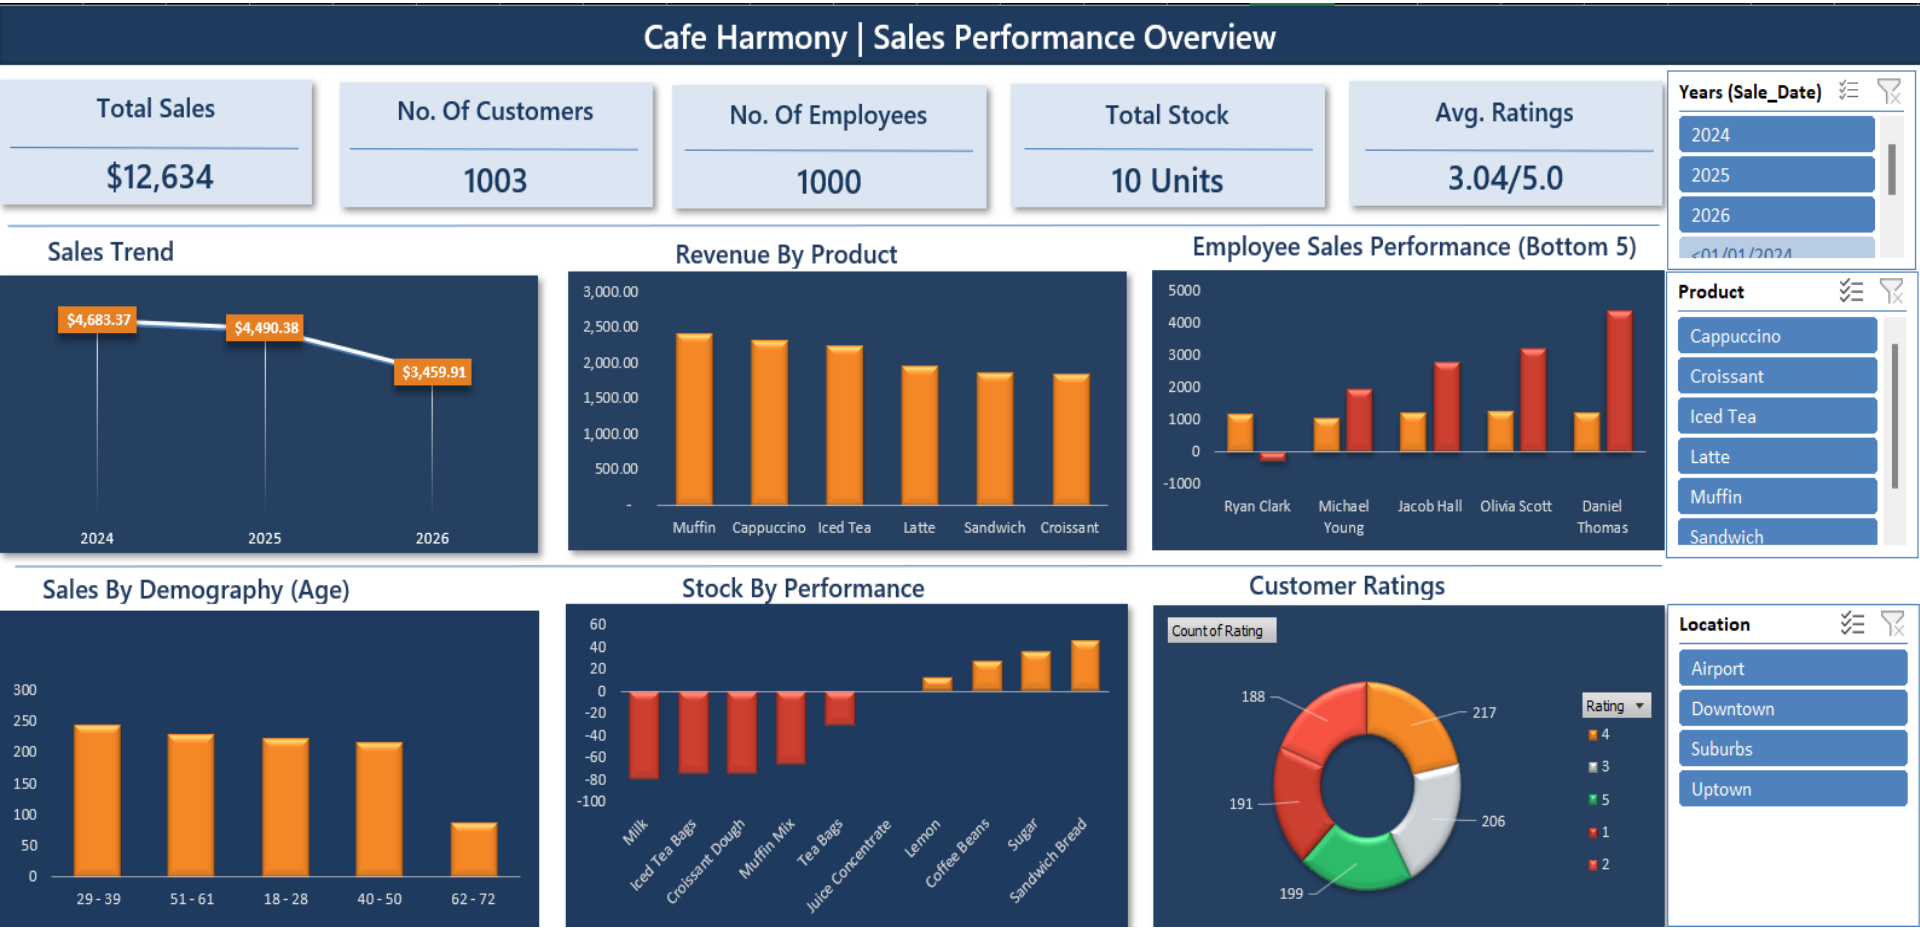
Business Problem:

- Rapid growth has created operational and performance management challenges.
- Need to improve sales performance, stock efficiency, employee productivity, and customer satisfaction.

Project Goals:

- Clean and structure all datasets for accurate analysis.
- Identify trends in sales, customer behavior, stock levels, and employee performance.
- Build an interactive dashboard to support data-driven decision making.

Interactive Dashboard Overview



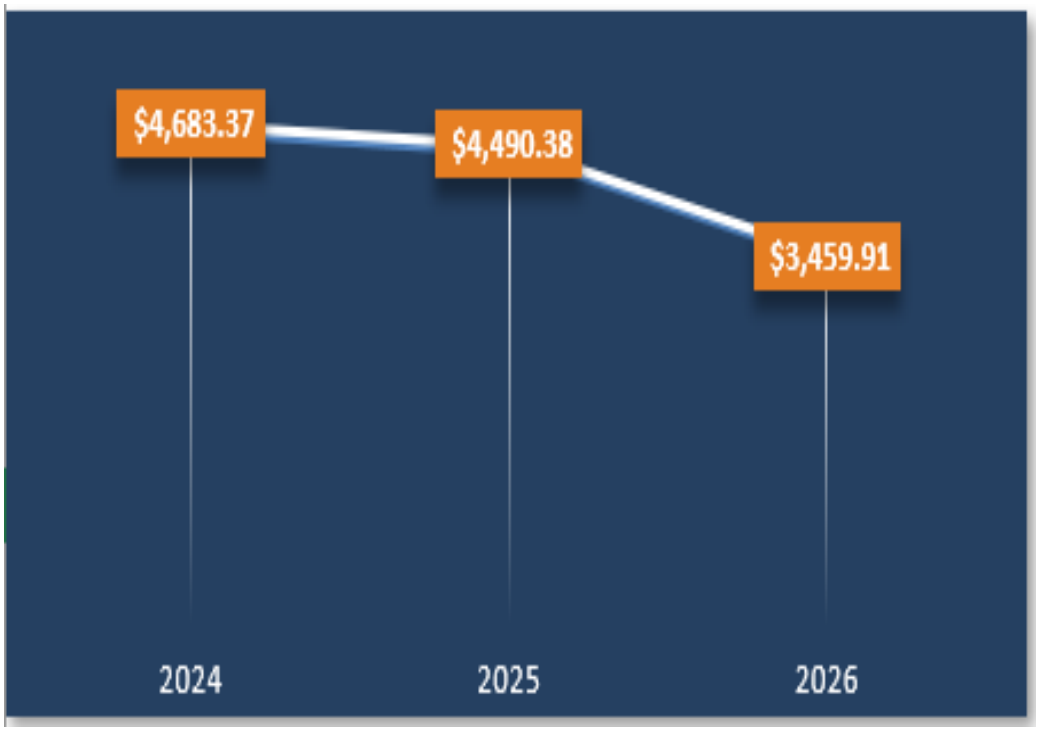
Developed an interactive Excel dashboard to visualize sales, employee performance, stock levels, customer demographics, and feedback trends.

Integrated slicers for Year, Product, and Location to enable dynamic filtering and deeper analysis.

Designed to support management in identifying performance gaps and making data-driven strategic decisions.

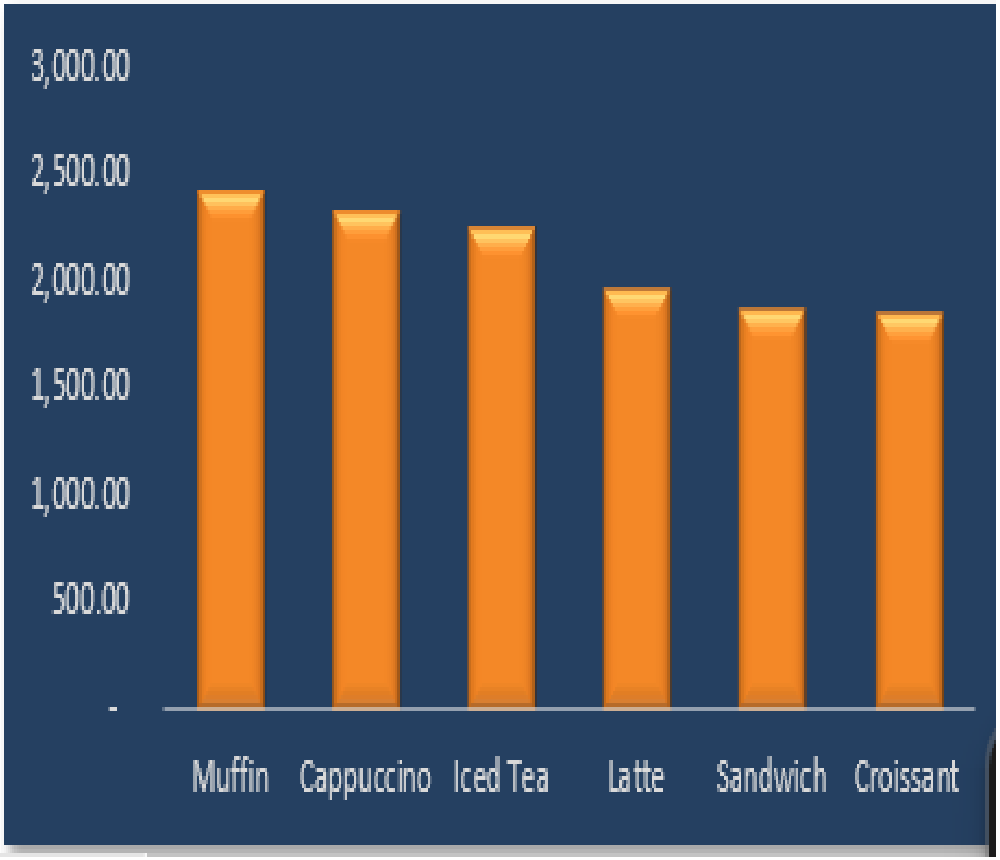
Dashboard Insight: Overall Sales Trend

- Sales declined consistently from 2024 to 2026.
- The drop was slight between 2024–2025 but significantly sharper between 2025–2026.
- The recent steep decline signals weakening revenue momentum and requires urgent strategic action.



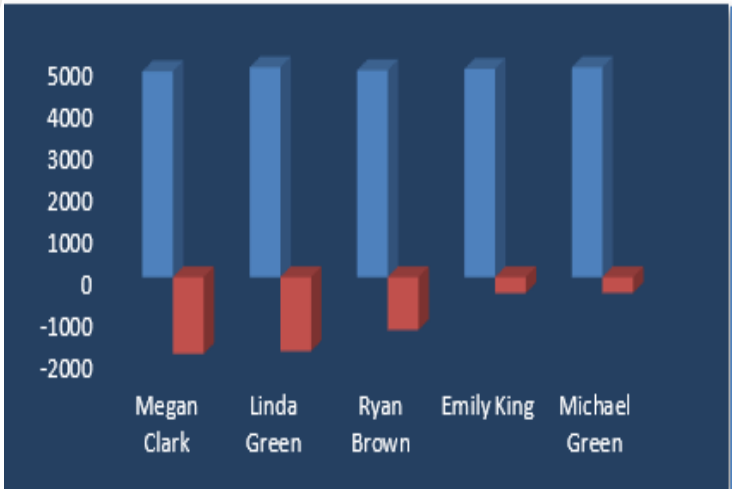
Dashboard Insight: Revenue by Product (Menu Performance)

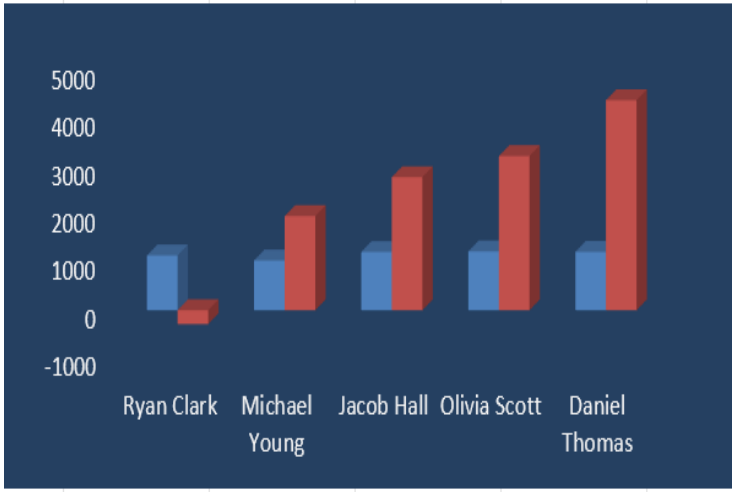
- Muffin, Cappuccino, and Iced Tea are the top revenue drivers, each generating over 2,200, with Muffin leading overall.
- Sandwich and Croissant are the lowest performers, creating a revenue gap of roughly 500–600 compared to top items.
- Revenue is concentrated in beverages and snacks, while some food items are underperforming.



Dashboard Insight: Employee Sales Performance

Bottom 5





Top 5

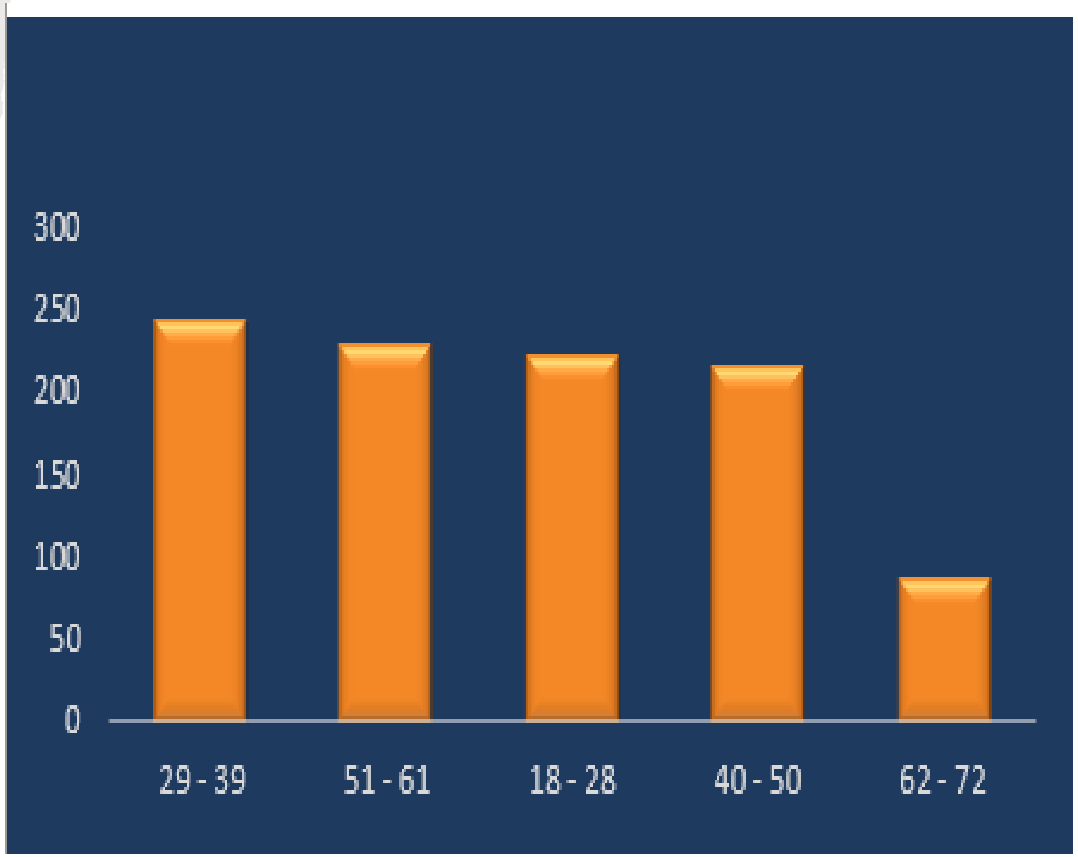
- A significant performance gap exists: bottom five employees fell well below targets, while top five exceeded them—some by a large margin.
- Sales productivity varies greatly across employees, indicating inconsistent performance levels.
- Since top performers surpassed the same targets others missed, the issue lies in individual capability rather than unrealistic goal setting.

Dashboard Insight: Customer Spending Analysis

•Customers aged 39+ and 51–61 generate the highest revenue, forming the core spending segment.

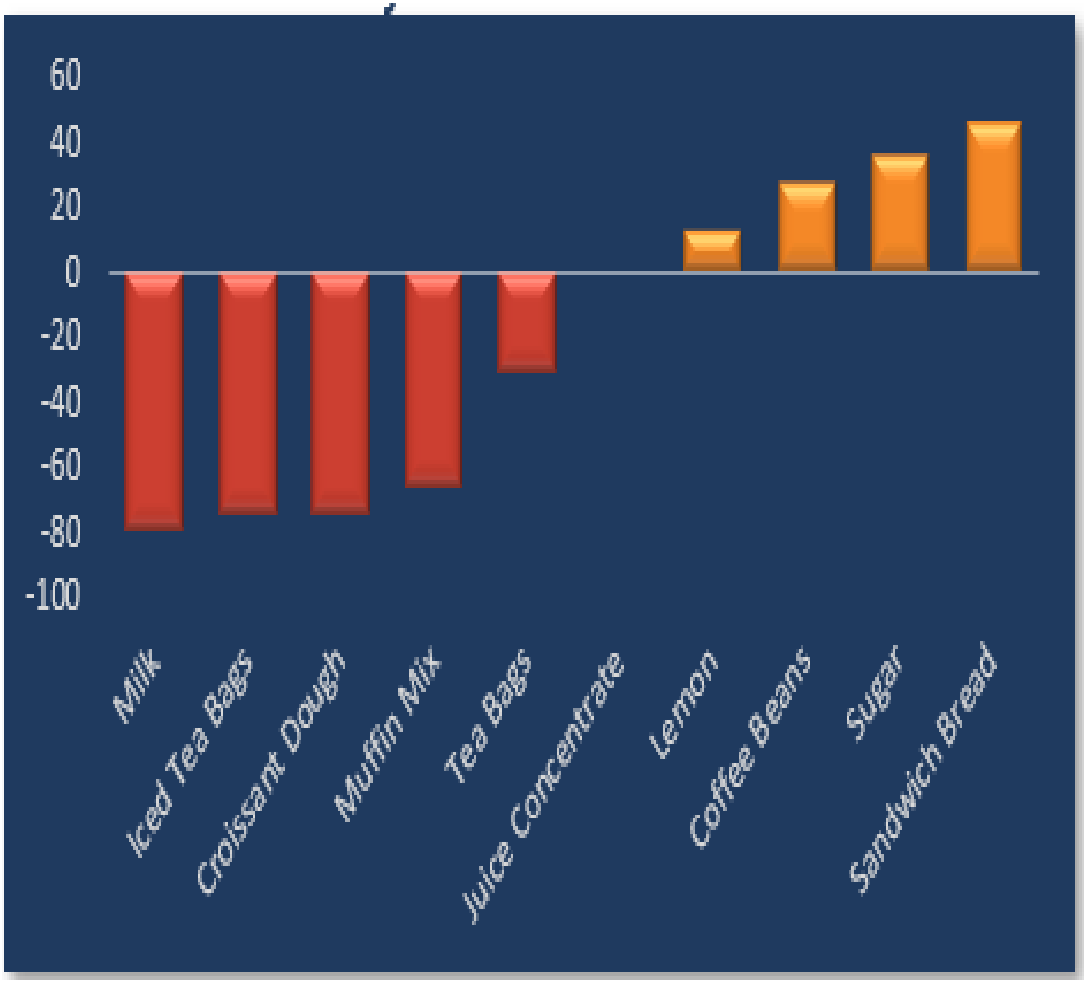
•The 18–28 group contributes moderately but underperforms compared to older segments.

•The 62–72 segment records the lowest spending, indicating limited engagement from senior customers.



Dashboard Insight: Stock Performance

- Key ingredients like Milk, Iced Tea Bags, Croissant Dough, and Muffin Mix are frequently understocked, risking production of top-selling items.
- Inventory imbalance exists, with surplus stock in items like Sandwich Bread, Sugar, and Coffee Beans.
- Continued stock shortages in core ingredients could further weaken sales performance.

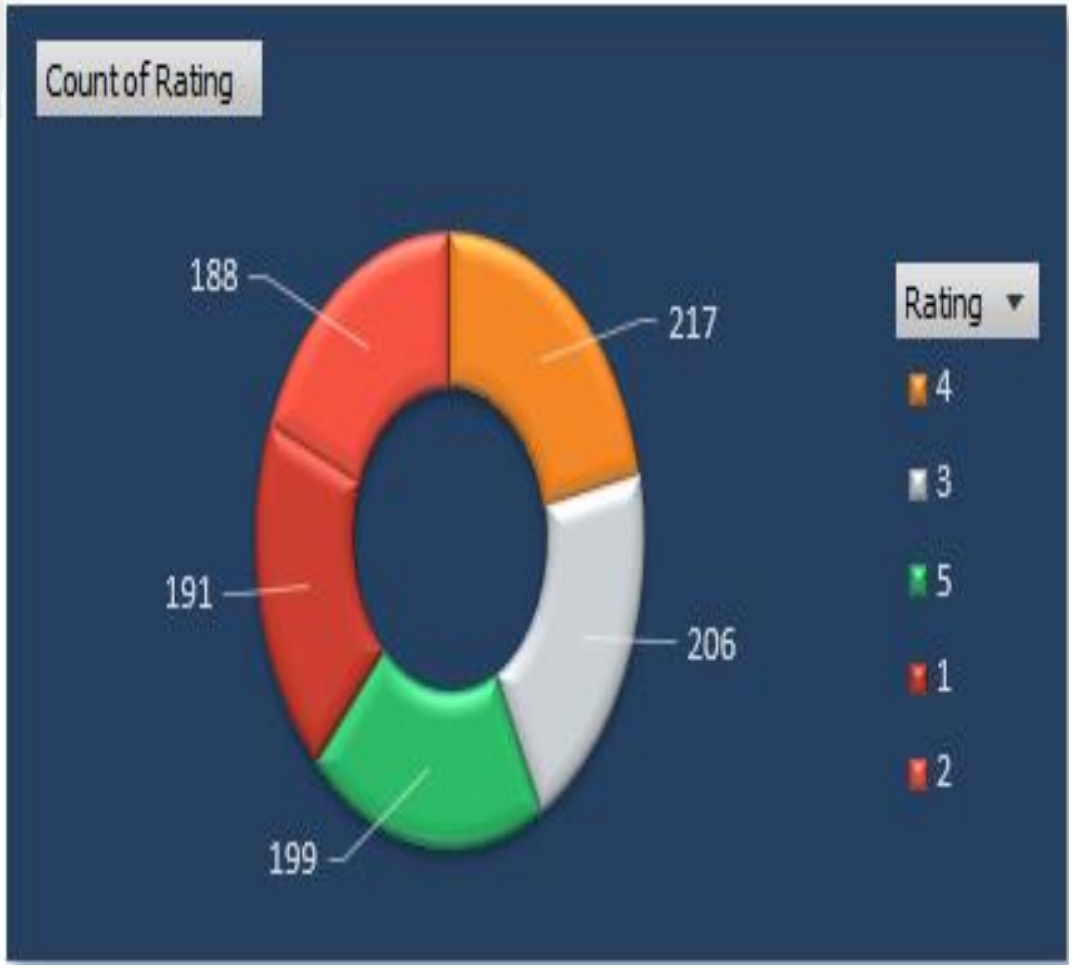


Dashboard Insight: Customer Feedback & Satisfaction

- Customer satisfaction is moderate, with 4-star ratings highest, but 5-star ratings are not dominant.

- Low ratings (1- and 2-star) form a significant portion of feedback, indicating service gaps.

- The balanced rating distribution suggests inconsistent customer experience across locations or staff.



Key Findings, Trends & Business Recommendations

OVERALL TRENDS

•Sales have declined steadily from 2024–2026, with a sharp drop in the most recent year, signaling weakening revenue momentum.

•Revenue is concentrated in a few top products and middle-aged customers, increasing dependency risk.

•Significant performance gaps exist among employees, alongside inventory imbalances in key ingredients.

•Customer satisfaction is moderate but inconsistent, with a notable share of low ratings.

Key Findings, Trends & Business Recommendations

KEY FINDINGS

- **Sales decline is structural, not seasonal.**
- **Business targets are achievable (top performers exceed them), but workforce capability varies.**
- **Inventory mismanagement may be contributing to lost revenue.**
- **Customer experience lacks consistency across interactions.**
- **Revenue risk exists due to over-reliance on a few menu items.**

Key Findings, Trends & Business Recommendations

STRATEGIC RECOMMENDATIONS

•**Stabilize Sales & Diversify Revenue:** Address the 2026 decline through root-cause analysis, targeted marketing to high-spending segments, promotional bundles, and reduced dependency on top products.

•**Strengthen Employee Performance:** Implement structured sales training, introduce performance-based incentives, and replicate best practices from top performers.

•**Improve Operations & Customer Experience:** Optimize inventory with forecasting and reorder controls, standardize service processes, and address low customer ratings to enhance loyalty and retention.
